

Item Number	Category	High Level Function	Requirement Description	Owner / Source	Date Submitted	Comments/Assumptions	Notes
TR1	Headlines		Provide the ability to use linkable and non-linkable headlines. Linkable headlines must be able to distinguish if the headline's link points externally or internally.This way some headlines could link and others may not.				
TR2	Calendar		Provide the ability to have linkable and non-linkable calendar entries. Also, must control if the link is external it should open in the same window; external links should open in new window.				
TR3	Community Search		Improve the way results are displayed to the user. Pagination should be endless. Maybe we can use "Next 20" instead of supplying all the pages in a "google-like" format.				
TR4	Search		Enhance the search to provide pagination capabilities. Also, improve how results are returned (relevance)				
TR5	Headlines		Expand headlines to be more flexible. For example if we need an alert on a page we can easily "pop" one up.			Assume we'll have a parameter we can pass to the custom JSP tag to bring up the appropriate message (headline).	
TR6	Personalization		Profile changes. We'll need to ensure our profiles are updated to match Xap requirements. Also, need to make sure we collect appropriate data to ensure we can target messages/content.				

Item Number	Category	High Level Function	Requirement Description	Owner / Source	Date Submitted	Comments/Assumptions	Notes
TR7	Security		Security changes for stronger password policy. Might need to strengthen the password policy or make it more flexible. This would and might include password expiration.				
TR8	Feedback/Survey		Updates to feedback/survey to be more flexible.				
TR9	Calendar		Ensure that the number "1" on the calendar becomes highlighted when clicked.				
TR10	Headlines		Separate headlines so that students and FP read headlines to a different table. This is a result of hooking into Interwoven and using Data Deploy. If we read/update/delete from same table then we cannot separate in Team Site.				
TR11	Other		Add meta tags for all pages				
TR12	Bookmarks		The current bookmarking feature assigns the same enterprise bookmarks to every user. Therefore each user has the same enterprise bookmarks. This can be cleaned up by having one set of enterprise bookmarks for all users.
